Industry

Tugra defies heat, cold and vibration just as reliably as dust and moisture – and scores with its high quality of light. Tugra can be individually adapted to the requirements of different industrial sectors thanks to VARIZON® technology and smart modules.

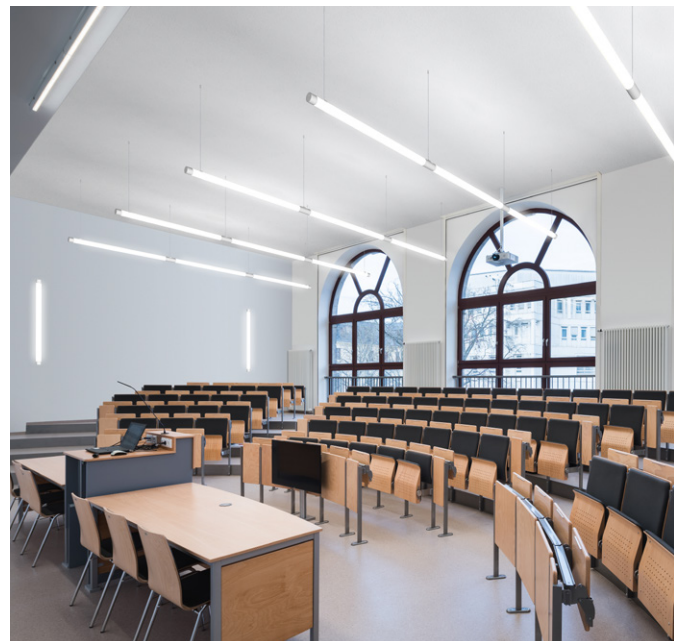

Retail

Tugra scores with customised light for retail – with Efficient White for best product displays, for example in fashion stores, or UGR19 for checkout areas in food retail and DIY stores. This is complemented by an attractive and distinctive design. Optional IoT modules herald the future of retail.

Office

The design harmonises perfectly with the industrial charm of modern new work architecture. Various optics with UGR19 ensure very good glare control and optimum visual comfort, especially for VDU workstations. Tugra, with IoT modules, can drive digitalisation in the office.

Education

High quality light, customised optics for classrooms, flexible mounting options and smart modules for digitalisation make Tugra an all-round solution for schools, universities and other educational institutions.
