Opendo D LED surface-mounted ceiling luminaire

Strong performance, attractive design, attractive cost – Opendo LED brings high-quality planar light to education and offices. It can be implemented either as a surface-mounted or suspended luminaire or as a single luminaire or continuous line. Application-specific optics – such as asymmetric blackboard light – ensure ideal visual conditions in every area. Especially impressive: Opendo LED takes versions with integrated function modules, e.g. presence detectors, CO2 sensor or battery-operated emergency light components to the standard and thus provides complete design flexibility.
